SCHWEIZER supports Electro Mobility in the context of WAVE 2012

Schramberg, September 18, 2012 – On its way across Europe, WAVE 2012 (World Advanced Vehicle Expedition) made a stop in Schramberg yesterday. The objective of this annual expedition, participating vehicles of which are being moved at 100 % by renewable energies, is to boost awareness for renewable energies and electro mobility. Schweizer Electronic AG, a recognized manufacturer of energy-efficient and environmentally-friendly products, supports this initiative.

A significant part of Printed Circuit Boards (PCBs) manufactured by SCHWEIZER is produced for the automotive industry. In this context the company dedicates their efforts to the megatrends mobility and energy efficiency, particularly to electro mobility. SCHWEIZER's products and solutions concentrate on three innovations focusses, which are Power Electronics, Embedding and System Cost Reduction. Innovations in these areas are essential for the progress in electro mobility. Among others, SCHWEIZER has already produced PCB solutions for start-stop systems, for electro motors of 4 KW but also for high-end motors of up to 40 KW. SCHWEIZER is convinced that electro mobility, coupled innovation-friendly conditions, can maintain and create many jobs in Germany, just as is the case in Schramberg.
